

# Aramid Cable Grips

Non-metallic grips, made to last  
and hold in salt water, waste water  
and where pollutants are present

# Aramid Cable Grips

UV-resistant, non-metallic grips, made to last and hold in salt water, waste water and where pollutants are present

Slingco's line of Non-Metallic Aramid Cable Grips are ideal for use in fibre optic cable installation operations, offshore applications, or for a multitude of uses in the utilities industry.

These grips are made of a high-strength, non-metallic aramid fibre, with UV protective coating, and now feature an improved weight to break ratio. They are suitable for pulling both single cable and multiple cable bundles.

Thanks to the non-metallic material, these grips are easy to work with even without gloves. The woven mesh material also offers a non-metallic, non-conductive alternative to steel grips.

We have many different styles of Non-Metallic Aramid Cable Grips for your project, such as Single Eye, Double Eye, Offset Eye, Lace Up, Mining Grips, and our new Single Eye Double Weave Grips made of ultra flex aramid material. We can also work with you to customise an Aramid Cable Grip to match any particular project specifications.

Call your Slingco Account Manager today and they will help you select the right grip for your project!

- ✓ Break loads similar to steel cable grips
- ✓ Lightweight
- ✓ No more frayed grip wires
- ✓ UV-resistant and strong enough to last in salt water, pollutants, and underground
- ✓ We can create custom grips to meet your specifications
